

SOMEONE IS USING A HIDDEN VOICE TO SCARE AND CONFUSE... BUT V2K GIRL IS ON THE CASE!

When Mia hears a mysterious voice in her room, she is frightened and doesn't know where it is coming from. Her brother Marcus thinks he is just playing a joke with a directional voice speaker, but the mischievous Vicki V2K wants to use the technology to scare people.

Just in time, V2K Girl arrives to teach everyone an important lesson: sound energy is powerful, and it should never be used to hurt, frighten, or control others.

PERFECT FOR
KIDS WHO LOVE
SUPERHEROES,
SCIENCE, AND
STAYING SAFE!

MEET THE DIRECTED ENERGY SUPERHEROES!

V2K GIRL'S SAFETY LESSON

Sound and voice technology can be amazing when used the right way.

It can help people communicate, learn, and stay safe.

But no one should use hidden sounds, voices, or speakers to scare, confuse, or bully another person.

ENERGY IS POWERFUL — USE IT FOR GOOD.

BE KIND.
BE SMART.
BE A HERO!

LEARN. STAY SAFE. USE ENERGY FOR GOOD.
TOGETHER, WE CAN MAKE THE WORLD BETTER!

Who we are

DEWA operates as a victim-advocacy, incident-reporting, research, and legislative-advocacy organization dedicated to documenting directed-energy crimes, supporting victims, informing the public, and working with federal agencies to strengthen national safety.”

Mission – To Inform, Educate, Provide Victim Support, and Protect Communities from the criminal misuse of Directed Energy technologies through forensic testing, detection systems, and public education.

Title: Directed Energy Superheroes, “The Voice Speaker Mystery”.

This book is dedicated to my children, family, friends and victims of direct energy weapons, worldwide.

Main Characters

V2K Girl™

A smart, brave young superhero who understands sound, voice, and directional speaker technology. She teaches children that voices, sound, and technology should be used to help people — never to scare or bully them

Vicki V2K™

A mischievous bad girl who uses a hidden voice speaker to frighten people and make them think someone is talking when no one is nearby.

Mia

A young girl who becomes frightened when she hears a voice in her room.

Marcus

Mia’s older brother. He thinks using a directional speaker to scare his sister is funny — until he learns how wrong it is.

Grandpa Ray

A wise grandfather who teaches the children that technology must always be used with care and kindness.

Mia loved bedtime stories, warm blankets, and the tiny night-light shaped like a star.

Every night, Grandpa Ray would say, "Sleep peacefully, Mia. You are safe, you are loved, and tomorrow is a brand-new day."

But one night, after the lights went low, Mia heard something strange.

A voice whispered, "Miaaaa..."

Mia sat up quickly.

Mia looked under her bed.

Nothing.

She looked behind the curtains.

Nothing.

She even checked inside her toy box.

Still nothing.

Then the voice came again.

"Miaaaa... I seeee you..."

Mia pulled the blanket up to her chin.

"That is not funny," she said.

Down the hallway, Marcus covered his mouth so he would not laugh.

In his hands was a small directional voice speaker.

He had learned that some speakers could send sound in one direction, almost like a flashlight sends a beam of light.

Marcus thought it was just a prank.

But someone else was watching.

Her name was **Vicki V2K**.

Vicki V2K smiled a sneaky smile.

"Good job, Marcus," she whispered. "Sound can be very powerful. Use it to scare her again!"

Marcus frowned.

"I only meant to joke around," he said.

But Vicki V2Ke better when people are scared."

Suddenly, a bright blue soundwave flashed across the room.

WHOOSH!

Standing in the doorway was **V2K Girl**.

Her cape shimmered like a wave of light. On her wrist was a special sound scanner.

"Not so fast, Vicki," said V2K Girl. "Sound is not for bullying."

Vicki V2K crossed her arms.

"Oh yeah? What are you going to do about it?"

V2K Girl stepped into the room calmly.

"I am going to teach the truth," she said.

She turned to Marcus.

"Some technology can send sound in a focused direction. That means a person may hear a voice or sound even when they cannot see where it is coming from."

Marcus looked down at the speaker.

"So... Mia really could hear it?"

"Yes," said V2K Girl. "And it frightened her."

Mia came into the hallway with Grandpa Ray.

Her eyes were watery.

"Marcus, was that you?" she asked.

Marcus felt his face get warm.

"I'm sorry, Mia," he said. "I thought it was just a joke."

Grandpa Ray placed a hand on Marcus's shoulder.

"Technology is powerful," Grandpa said. "A joke is not funny if it makes someone feel unsafe."

Vicki V2K rolled her eyes.

"Oh please. It was just a little voice."

V2K Girl stood tall.

"A little voice can cause big fear when someone does not know where it is coming from," she said. "That is why we use sound technology for good — for learning, safety, communication, and helping people."

Vicki V2K stomped her foot.

"You are ruining all my fun!"

Vicki grabbed the speaker and pointed it toward Mia.

"Let's see if she gets scared again!"

But V2K Girl lifted her sound shield.

ZING!

The sound bounced safely into the shield and turned into music.

La-la-la-la!

Mia smiled.

"That sounds much better."

Vicki V2K tried again.

"Boo!" she shouted through the speaker.

But V2K Girl adjusted her wrist scanner.

The scary voice changed into a gentle message:

"Use energy for good."

Grandpa Ray chuckled

"That is a message worth hearing."

Marcus stepped forward.

"Vicki, stop. I do not want to scare my sister anymore."

Vicki frowned.

"You are no fun."

Marcus shook his head.

"I can still have fun. I can use the speaker for puppet shows, science projects, and announcements at school."

V2K Girl smiled.

"Now you are thinking like a hero."

Vicki V2K backed away.

"You may have stopped me today, V2K Girl, but I will be back!"

With a swirl of static and sound, she disappeared.

BZZZT!

Mia looked at V2K Girl.

"Will she really come back?"

V2K Girl nodded.

"Maybe. But now you know the truth. When something feels wrong, tell a trusted adult, stay calm, and look for safe answers."

Grandpa Ray sat everyone at the kitchen table.

He placed the small speaker in the middle.

"This is not a toy for scaring people," he said. "It is a tool. And tools must be used responsibly."

Marcus nodded.

"I understand."

Mia smiled a little.

"Can we use it for something nice?"

The next day, Marcus and Mia used the speaker for a backyard puppet show.

"Welcome, everyone!" Marcus announced.

The sound traveled clearly across the yard.

Mia made the puppets dance.

Grandpa Ray clapped.

V2K Girl watched from above, smiling.

V2K Girl flew into the sky as the sun began to set.

Her mission was not just to stop villains.

Her mission was to teach children, families, and communities that energy is powerful.

Sound can help.

Light can guide.

Signals can connect.

Technology can protect.

But it should never be used to scare, hurt, bully, or control anyone.

V2K Girl's Safety Lesson

Sound and voice technology can be amazing when used the right way. It can help people communicate, learn, and stay safe.

But no one should use hidden sounds, voices, or speakers to scare, confuse, or bully another person.

Energy is powerful — use it for good.
